

Drashti

A Network monitoring Tool

Project for IX Sem MCA

Submitted To : Prof. Jugendra Dongre

Submitted By : Deepak JOSHI
IC-2K16-14

Introduction

Monitoring an active communications network in order to diagnose problems and gather statistics for administration and fine tuning.

Includes operation needed to run network services smoothly.

Goal

Monitor Every Device on the Network and show Complete Information in Real Time.

Fault Monitoring of essential resources.

Send important alerts to admin via email.

Importance of Network monitoring

Fault Network Devices can be detected through early detection.

Server Downtime can be reported immediately.

Detailed Statistics on a single Platform

Features

1. Monitoring the essentials
2. Listing Entire Infrastructure
3. Keep Track of outages
4. Helps to Fix Issue
5. Provide real time Information
6. Visualization
7. Helps to Manage Growing Network

Requirements

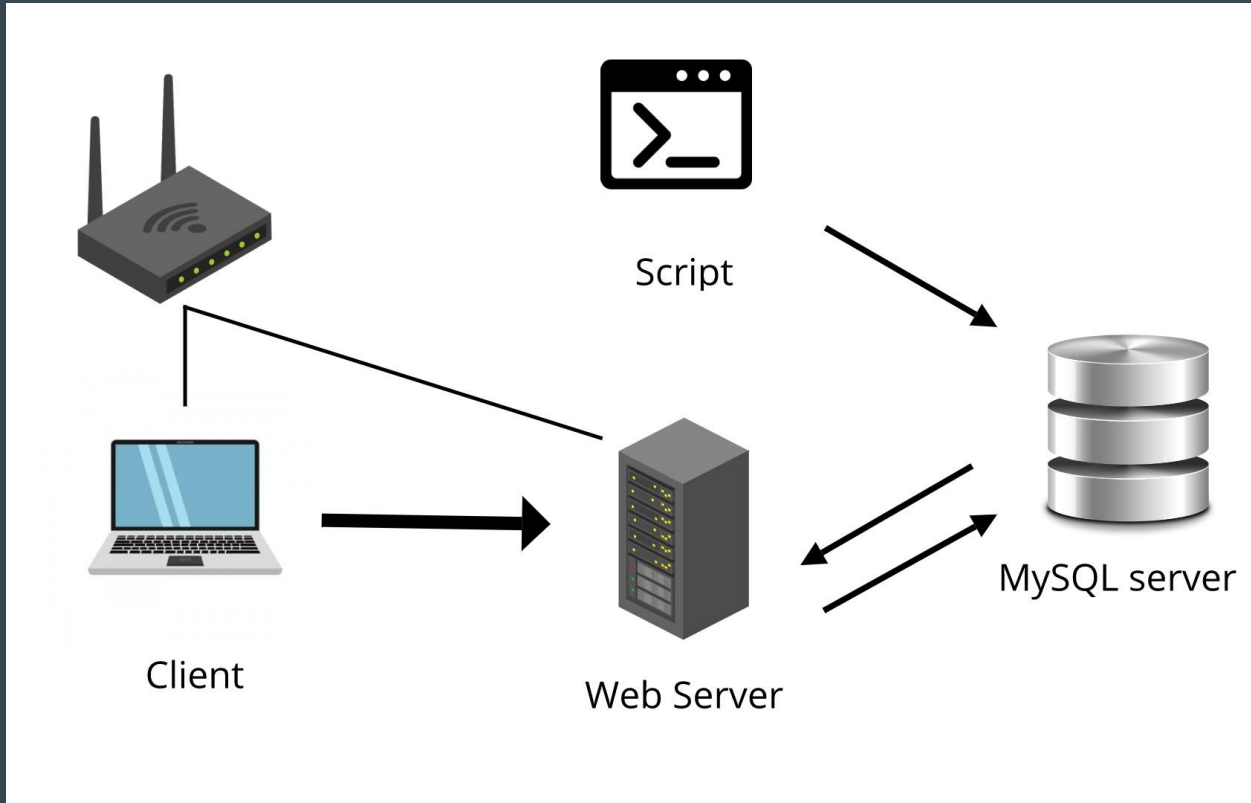

Hardware Requirement

- Dual Core Processor
- 1 GB Primary Memory
- 16 GB Secondary Memory

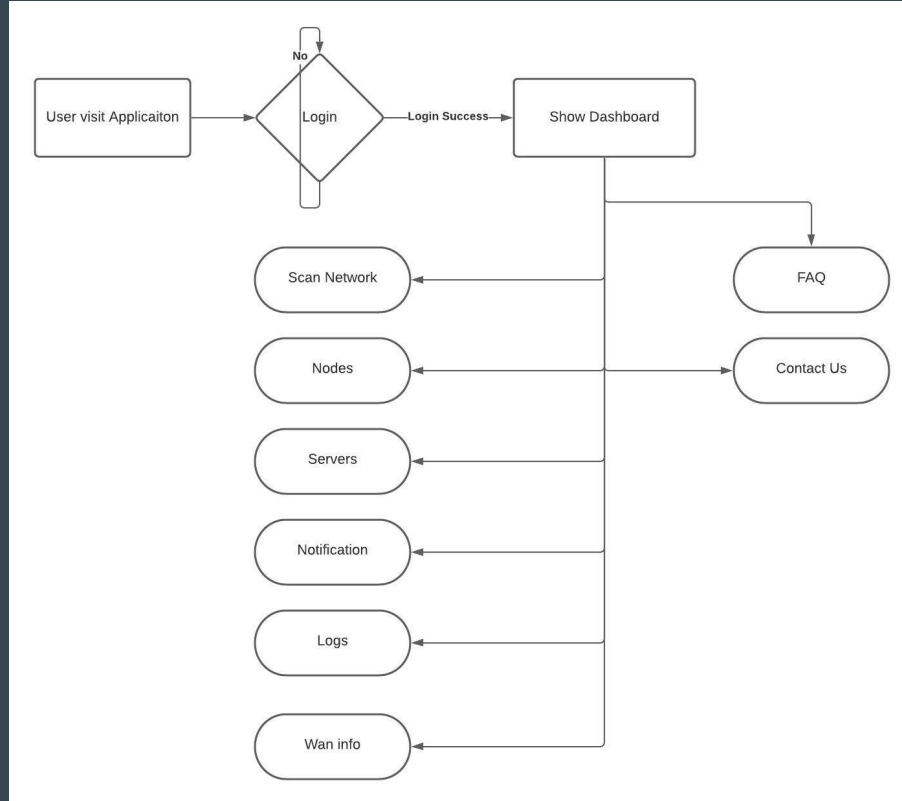

Software Requirements

- Operating System (Linux or UNIX based)
- Web Browser for Client
- Required Frameworks

WAN info

Location	Indore , Madhya Pradesh , India
Wan IP	122.168.77.213
ISP	AS24560 Bharti Airtel Ltd., Telemedia Services
Timezone	Asia/Kolkata
Wan IP	122.168.77.213

Conclusion

1. Monitoring is the only way to find out whether the network is functioning according to plan.
2. This application provides all the information of devices.
3. The outcome is a wide range of useful data.
4. These data can be used to provide a statistical report.
5. Ultimately helps to make the network more efficient for use.
